

Quebrada Sol Copper

Minera Quebrada Sol S.A.C. (fictional) · PE · -17.12, -70.58 · Open pit · Flotation · operating
Transparency **88/100** – Good, minor gaps · TIER2 · assurance: limited · method: GRI 303 2018

Basin stress

Extremely high
Pacific slope river basin (illustrative)

Withdrawal 21,000 ML	Consumption 17,911 ML · 85%	Intensity 0.60 m³ consumed / t ore	Per t Cu 142 m³ consumed (allocated)
--------------------------------	---------------------------------------	--	--

Site water balance

Inputs by quality (ML)

Outputs (ML)

Balance residual **-1.2%** of withdrawal (within $\pm 5\%$ tolerance) · 50% of volume metered

Seasonality (monthly, ML)

Score breakdown

Tier-1 completeness	24/24
12/12 must-report data points	
Tier-2 depth	20/20
source sub-type & quality, consumption components, storage, task water, monthly profile, basin context	
Data quality	23.1/30
50% of volume measured	
Assurance	11/16
limited	
Balance closure	10/10
residual -1.2% of withdrawal	

Tier 1 data points

- ✓ 1. Site ID & name
- ✓ 2. Coordinates & country
- ✓ 3. Primary commodity
- ✓ 4. Mine type & processing route
- ✓ 5. Reporting year
- ✓ 6. Ore (or brine) processed
- ✓ 7. Contained metal / LCE produced
- ✓ 8. Withdrawal by source
- ✓ 9. Discharge by destination
- ✓ 10. Consumption total
- ✓ 11. Reused / recycled water
- ✓ 12. Assurance status

Framework coverage from this passport

- ✓ GRI 303-3
- ✓ GRI 303-4
- ✓ GRI 303-5
- ✓ ESRS E3-4
- ✓ CDP 9.2.x
- ✓ ICMM 2021
- ✓ IRMA 4.2.5

Screening flags

- ! Operates in a extremely high water-stress basin
- ! 9 water-related community grievances reported
- ! 2 water incidents / permit exceedances
- ! Competes with agriculture in a stressed basin

Illustrative synthetic data. Fictional site, operator and figures generated for the EIT Water Hackathon prototype. Basin stress is a placeholder, not an Aqueduct lookup. Scoring weights are a team proposal to be calibrated with WU Vienna.
